Book Synopsis

A specter is haunting the modern world... Society has undergone a massive change over the past several decades – the type of change from which there is no return. This change has been the transition from the Industrial Age to the Information Age; a transition which is still in its infancy. Though still an infant, the Information Age is here, and we are living within its early stages. Most people may not know this yet, but they can feel it. The institutional foundation of the industrial world is crumbling all around us. Governments are broke. Social welfare programs are severely underfunded. Unions are broke. Pension plans are underfunded. National currencies have been trashed. Blue-collar jobs in the developed world have been lost to low-wage countries. Low-wage jobs have been lost to robotics and automation. Many of the jobs just disappeared entirely. Everyone's retirement account is propped up by the constant creation of money out of thin air required to keep the financial markets afloat. Welcome to the Information Age! In truth, these are all great things. The seeds of a second Renaissance for human civilization have already been sown. It is a Renaissance based on decentralization, markets, commerce, distributed systems, participatory networks, and individual self-empowerment. Read on to find out why... The individual is rising. Here is what you will be able to do after reading *The Individual is Rising: 3rd Edition*:

- Understand how the monetary system evolved over the last century to pave the way for mass centralization
- Analyze the greatest Ponzi scheme ever attempted... and what happens when it implodes
